Skills

Programing Languages : Flutter, Dart, Kotlin, Java, Firebase, Swift, RestAPI, GraphQL

SoftSkills : Leadership, TeamManagement, ProjectManagement, TechnicalAnalyst

Projects

MINUMAN.COM

In this project, I created an Android and iOS-based application for an e-commerce with the technology stack that I used, Flutter and Shopify. I fulfilled the business owner's expectations to create an application that is fun to use with user behavior that often makes transactions using mobile apps.

Nakedpress

In this project, I continued the application that had previously been running on the Android platform, and added support for the iOS platform and redesigned the application, which was previously only standard, into an application that makes it easy for customers to make subscription purchases for NakedPress products and the technologies I use are Flutter and Shopify

Teman Curhat

Project in the well being center industry, here I optimize the services for B2C that are already running, and create additional services for B2B (Teman Curhat Corporate) into one unit from the previous application, without requiring agents to download additional applications.
